

**Additional file 3. Suppression of tet-inducible transgene *Pou5f1* in ZHBTc4 ES cells in a time course after adding tetracycline to the media.** (A) Log expression change from microarray data (log10), oligo is in ORF. (B) Expression change in real-time PCR data normalized by expression in parental EB5 cell line, primers are in transgene-specific region. (C) Western blot showing decrease in POU5F1 protein amount, UBTF is used as a control.
