

Supplemental Data 2: TBC1D3 increases EGF binding. NR6:hEGFR cells expressing TBC1D3 or vector alone were incubated with ^{125}I -EGF (70 ng/ml) for 3 h at 4°C. Surface-bound ligands were released by incubation in ice-cold “acid strip” buffer as described in Experimental Procedures. The data are presented as means \pm SD of three independent (* $p < 0.01$).
