^aProbe set ID represents Affymeterix probe set number.

^bAGI represents *Arabidopsis* Genome Initiative (AGI) locus identifier corresponding to each gene represented on the array.

^cq-value ≤ 0.05 (5% False discovery rate) was used to determine genes differentially expressed in PPV-infected protoplasts relative to the control.

^dp-values ($p \leq 0.05$) from the ANOVA were used to calculate q -value after adjusing the values with method as described [21].

^eCalculation of fold changes was defined in Methods.

^fhpt, hours post transfection.

^gDetermined following the method of the *Arabidopsis* MIPS (Munich Information Centre for Protein Sequences) fucntional classification scheme.
