^aProbe set ID represents Affymetrix probe set number.

^b AGI represents *Arabidopsis* Genome Initiative (AGI) locus identifier that corresponds to each gene represented on the array.

^c *q*-value ≤ 0.05 (5% False discovery rate) was used to determine genes differentially expressed in PPV-infected leaves relative to mock-inoculated control leaves.

^d *p*-values ($p \leq 0.05$) from the ANOVA were used to calculate *q*-value after adjusting the values using Benjamini and Hochberg [21] multiple testing correction.

^e Calculation of fold changes was defined in Methods.

^f hpt, hours post transfection.

^g dpi, days post inoculation.

^hDetermined following the method of the *Arabidopsis* MIPS (Munich Information Centre for Protein Sequences) functional classification scheme.
