

Comparative Proteomics of Human Monkeypox and Vaccinia Intracellular Mature
and Extracellular Enveloped Virions

Supplemental Figure 1

This is the same hierarchal cluster analysis as Figure 4 (viral proteins) except that the columns (i.e., the experiments) were clustered to demonstrate the sample relationships. The similarity of the experiments is visualized as a tree. Overall, the LC-MS replicates clustered together. Also, the preliminary monkeypox EEV sample clustered with the IMV samples.
