

Supplemental Figure S3

Legend on following page

Supplemental Figure S3. Bimolecular fluorescence complementation constructs. The YFP sequence within the pBS-YFP vector was replaced with either the (i) His₆-tagged N-terminal YFP fragment (YFP_N), (ii) FLAG-tagged C-terminal YFP fragment (YFP_C), (iii) full-length GGH1 fused to YFP_N, (iv) full-length GGH2 fused to YFP_N, (v) full-length GGH2 fused to YFP_C, or (vi) the signal peptide of GGH1 fused to YFP_C.
