

Table S2. Skeletal muscle proteins separated and purified by 2DGE and identified by tandem mass spectrometry

Mitochondrial fraction of rat quadriceps muscles were prepared by differential centrifugation as described in the Methods. The mitochondrial pellets were used to perform 2DGE for protein purification. The protein serial number sequence is according to Figures 1 and 4. Proteins were identified by tandem mass spectrometry followed by Sequest database search. Proteins are listed with their identification parameters such as accession number, % amino acid (AA) coverage, sequest score and number of specific peptides obtained along with their sub-cellular location and function.

No	Protein name	Accession no	% AA coverage	Sequest Score	Unique Peptides	Subcellular location	Protein function
1	myosin heavy chain, skeletal muscle, adult 1	34870884	13.55	234.32	23	cytoskeleton	muscle contraction
2	myosin, light polypeptide 2	6981238	45.72	90.25	9	cytoskeleton	actin-dependent ATPase activity, calcium ion binding, motor activity
