

Figure S3

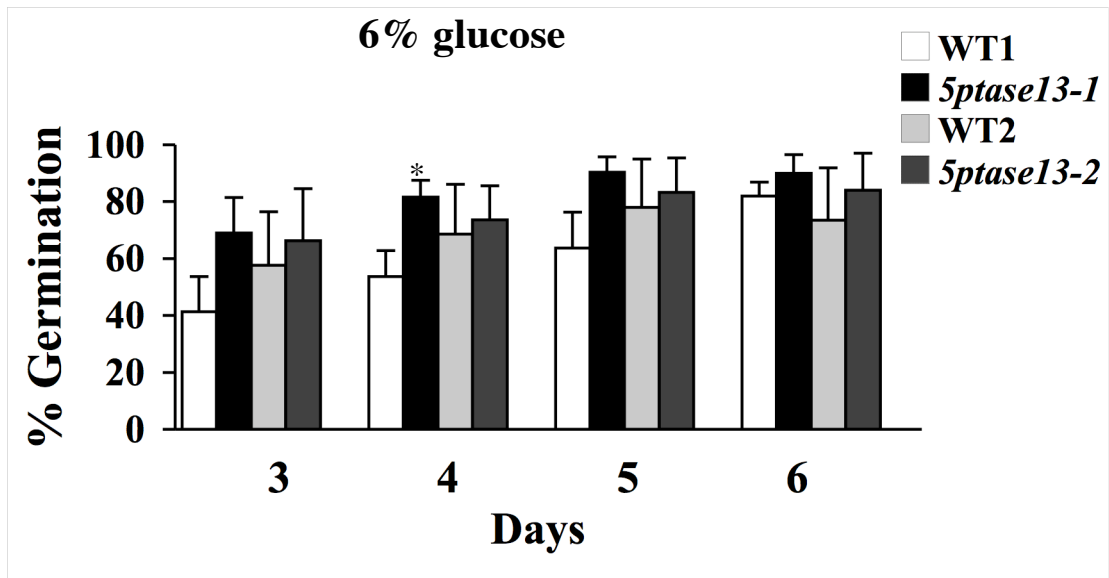

Figure S3. *5ptase13* mutants are less sensitive to 6% glucose under light. WT and *5ptase13* mutant seed was germinated and grown in the light for 6 days on 0.5xMS salts, 0.8% agar, and 6% glucose. Germination rate was scored for each group of seeds starting from day 3. Values are means \pm SE (n = 50). * indicates p value of < 0.05 as compared to WT. The experiment was independently repeated three times.
