

Supplemental Figure 1. **Nuclear excluded Tax mutant fails to enhance IRIF formation.** Cells were transfected with expression vectors for Tax (B, J, R) or Tax mutant (F, N, V) and subjected to 5 Gy ionizing radiation. The cells were then allowed to recover for 1 hour (A to H), 4 hours (I to P) and 8 hours (Q to X). Also shown is expression of gH2AX (C, G, K, O, S, W). Nuclei were counterstained with DAPI/TOPRO-3-iodide (A, E, I, M, Q, U) and merged images are shown (D, H, L, P, T, X).
