Frahm et al. Supporting Fig. S1: Flow-cytometric analysis of IFN- γ -producing cells. Epitope-specific T cells in six subjects detected in the absence of the original restricting allele were analyzed for the expression of CD4 or CD8. Each subject is represented in two rows. Upper rows are gated on CD3+ CD8+ T cells, lower rows on CD3+ CD4+ T cells. Left graphs are negative controls stimulated in the absence of peptide (Nil), subjects and peptides are marked underneath each graph.
