

Supplemental Figure S2. Auxin response gradients in *miz2* root tips upon exogenous auxin treatment. Fourteen-day-old seedlings were cultured for 24 h in liquid 1/2 MS medium containing various concentrations of naphthaleneacetic acid (NAA). For control cultures, an equivalent volume of dimethylsulfoxide was added to the medium. *DR5::GUS* signals in wild type (A-D), and *miz2* (E-H) are shown. Scale bar, 100 μ m.
