	rs11575074	97.6%	0.129	0.74										

NOTE.- HWE=Chi-squared test for Hardy-Weinberg equilibrium in controls, or Z-test for Hardy-Weinberg equilibrium in untransmitted parental alleles treated as a diploid genotype. Success = percentage of samples (cases, controls or parents) successfully genotyped for each marker. MAF = minor allele frequency. * Results for 1320 Gambian trios, rest of Gambian family results represent those from 612 trios.
