

Figure S4. Letter labeling of the phenotypes observed in *C. elegans*, *C. briggsae* and *C. remanei*. Most of this figure is based directly on Figure 6A and summarizes the phenotypes reported in *C. elegans*, *C. briggsae* and *C. remanei* as the level of inductive signal (I) is increased (Felix, 2007). Here, we have assigned specific letter labels to the phenotypes. The wild-type phenotype is labeled W. The phenotypes within classes B and C are labeled as N, P, M, R and S in order to distinguish species-specific phenotypes. Classes A, B, C and D are described in the legend to Figure 6A.
