

## Supplemental Materials

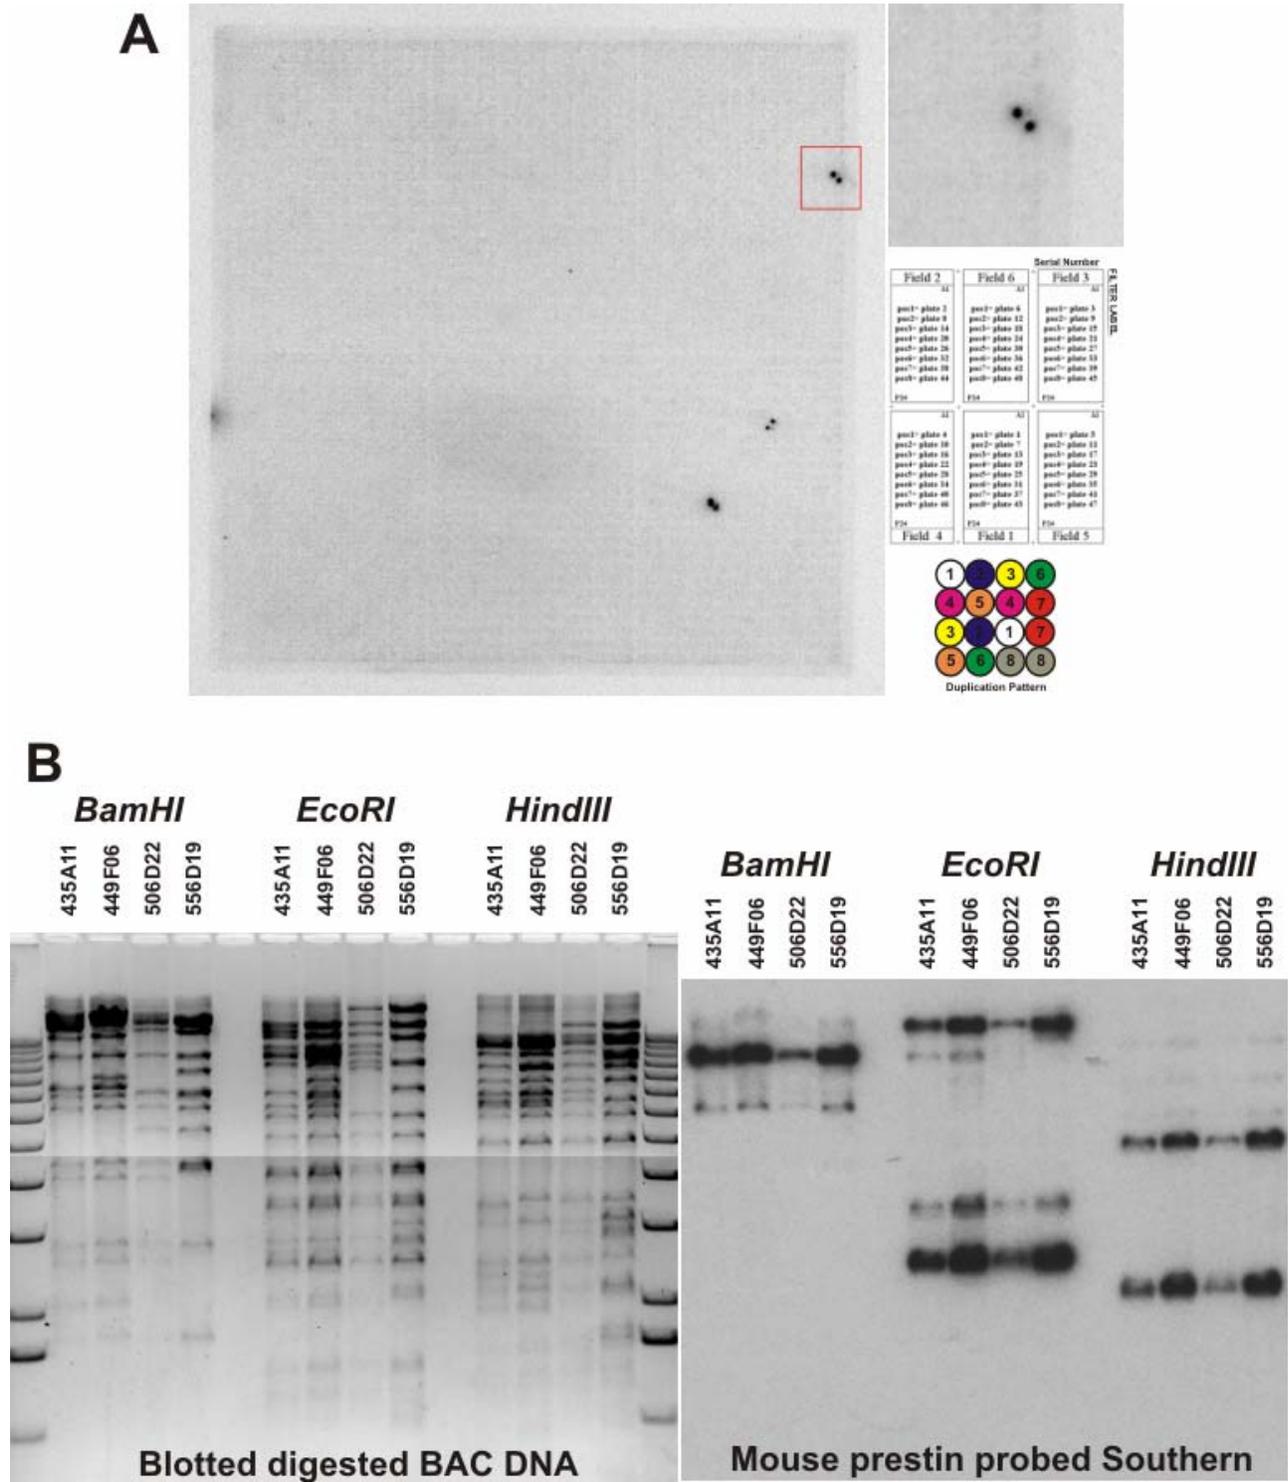

**sTable 1.** Species, common name and taxonomy of eukaryotic organisms. (see attached Table)

**sFig. 1.** Identification of Oanat BAC clones carrying the *SLC26A5* gene. Panel A shows hybridization of P-32 labeled mouse prestin on a BAC Oanat genomic library with three positive clones. An enlarged image of the region within the red box shows the arrangement of the duplicate positive clones. The method for identifying the locations of the clones based on 6 fields within each filter and the arrangement for identification of the duplicated individual clones. In Panel B four BAC clones were selected and analyzed by Southern blotting (B) and restriction enzymes BamHI, EcoRI and HindIII were used.

**sFig. 2.** Alignment of the eutherian SLC26A4 proteins. Alignments of the pendrin (SLC26A4) polypeptides are shown with the deduced polypeptide sequences being compared with the consensus eutherian SLC26A4 sequence. The eutherian species are arranged from high to low frequency specialists. The amino acid alignments are presented with identical residues to the initial polypeptide being represented as dots. Background color of each residue is presented using RasMOL color designations (Sayle and Milner-White, 1995). Gaps in the aligned sequences are indicated by the dashed line. The consensus sequence, residue conservation and utilization (Sequence logo) are provided and missing of sequence data is indicated by X. Residue numbers are provided at the top of each row of sequence. A 1 kb ladder (Invitrogen, Carlsbad, CA) was used as the DNA fragment size marker.

**sFig. 3.** Alignment of the eutherian SLC26A6 proteins. The amino acid alignments of the CFX (SLC26A6) proteins are presented with identical residues represented as dots. The eutherian species are arranged from high to low frequency specialists. Background color of each residue is presented using RasMOL color designations (Sayle and Milner-White, 1995). Gaps in the aligned sequences are indicated by the dashed line. The residue conservation and utilization (Sequence logo) are provided and absence of sequence data is indicated by X. Residue numbers are provided at the top of each row of sequence.
