The genes listed are either down- or up- regulated in the *N. gonorrhoeae* FA1090 *modA13::kan* mutant strain. The identity of the gene is indicated with the gene ID in the annotation of the *N. gonorrhoeae* genome (TIGR). The average ratio presented is the mean of FA1090 *modA13::kan* mutant:wild-type FA1090 *modA13* ON from six replicate spots

on three independent microarrays, incorporating a dye swap. Only those genes with an expression value above 1.5-fold were included in this study. \*Genes have been shown to be Fur regulated [56].
