11026	AT2G30470.1   Symbol: HSI2   HSI2 is a member of a novel family of B3 domain proteins with a sequence similar to the ERF-associated amphiphilic repression (EAR) motif. It functions as an active repressor of the Spo minimal promoter (derived from a gene for sweet potato sporamin A1) through the EAR motif. It contains a plant-specific B3 DNA-binding domain. The Arabidopsis genome contains 42 genes with B3 domains which could be classified into three families that are represented by ABI3, ARF1 and RAV1. HSI2 belongs to the ABI3 family. It is expressed at similar levels in all organs. Treatment with 6% sucrose showed a slight increase in transcript levels after 24 h. No changes were observed after treatment with 50??M ABA. It is localized in the nucleus via a nuclear localization sequence located in the fourth conserved region of the C-terminal B3 domain.   chr2:12987584-12992110 REVERSE   Aliases: HSI2, T6B20.17, T6B20_17	4.9	6.0	-1.1	-0.6	100.0%	-4.6

12278	AT1G12610.1   Symbol: DDF1   encodes a member of the DREB subfamily A-1 of ERF/AP2 transcription factor family (DDF1). The protein contains one AP2 domain. There are six members in this subfamily, including CBF1, CBF2, and CBF3. Overexpression of this gene results in delayed flowering and dwarfism, reduction of gibberellic acid biosynthesis, and increased tolerance to high levels of salt. This gene is expressed in all tissues examined, but most abundantly expressed in upper stems. Overexpression of this gene is also correlated with increased expression of GA biosynthetic genes and RD29A (a cold and drought responsive gene).   chr1:4289954-4290994 REVERSE   Aliases: DDF1, DWARF AND DELAYED FLOWERING 1, T12C24.14, T12C24_14	2.6	2.5	0.1	0.5	100.0%	-5.5

16152	AT5G25810.1   Symbol: TNY   encodes a member of the DREB subfamily A-4 of ERF/AP2 transcription factor family (TINY). The protein contains one AP2 domain. There are 17 members in this subfamily including TINY. Ectopic or overexpression of this gene in a Ds tagged line has reduced cell expansion. The expression of this gene is induced by ethylene and light and appears to stimulate cytokinin biosynthesis.   chr5:8986774-8987790 REVERSE   Aliases: F18A17.60, F18A17_60, TINY, TNY	2.6	2.5	0.1	0.3	100.0%	-4.1
