

Supplemental Figure 1. *ACT8* Gene and Different Transgenic Constructs Used in Complementation/Suppression.

(A) Physical map of *act8-2* allele containing a T-DNA insertion at the ATG codon. The insertion deletes this codon along with 19 bases. The arrows indicate the location and orientation of primers that were used to distinguish native (*ACT8-5'S4* and *ACT8-74A*) and T-DNA mutant (*ACT8-5'S4* and *LB-GABIS1*) alleles. TATA box specifies the start of transcription. ATG = Start codon. L = Leader exon up-stream of exons 1, 2, 3 and 4.

(B) Actin overexpression constructs. Each of the nine different constructs are in three boxes (left box: promoter, 5' untranslated region, leader exon to initiation codon ATG of exon #1; middle box: cDNA from different vegetative actin genes; right box: 3' untranslated region and poly(A) sequences). TAA = Stop codon. *ACT2*, *ACT8* and *ACT7* regulatory and coding sequences are shown respectively in blue, orange and green.

Supplemental Figure 2. Phenotypic Analysis of Vegetative Actin Single and Double Mutants.

(A) Root length of 10-day-old wild-type (Columbia [Co] and WS) and different mutant seedlings. N = 50. WT, wild-type; 2-1, *act2-1*; 8-2, *act8-2*; 7-4, *act7-4*; 2-1/8-2, *act2-1 act8-2*; 2-1/7-4, *act2-1 act7-4*; 8-2/7-4, *act8-2 act7-4*.

(B-D) DAPI stained root portions of wild type, and *act2-1 act7-4* (2/7) and *act8-2 act7-4* (8/7) double mutants.

(E) Bar graph showing differences in the number of pavement cell lobes between wild-type and different double mutants. N = 30.

The bars in **(A)** and **(E)** represent standard deviation.

Supplemental Figure 3. Overexpression of ACT8 Restores Normal Plant Growth to *act2-1 act7-4* Double Mutants.

(A) Height of adult *act2-1 act7-4* (2-1/7-4) plants rescued by ACT8 expression under the control of *ACT7* (A7:A8), *ACT2* (A2:A8), *ACT8* (A8:A8), and *ACT2* and *ACT7* (A2&A7:A8) regulatory sequences. WT: wild-type. N = 20.

(B) qRT-PCR analysis of relative quantities of *ACT2*, *ACT7* and *ACT8* transcripts in wild-type, *act2-1 act7-4* double mutant and an *act2-1 act7-4* plant rescued with A7P:A8.

The data represent average values of two technical replicates.

The error bars in (A) and (B) correspond to standard deviation.
