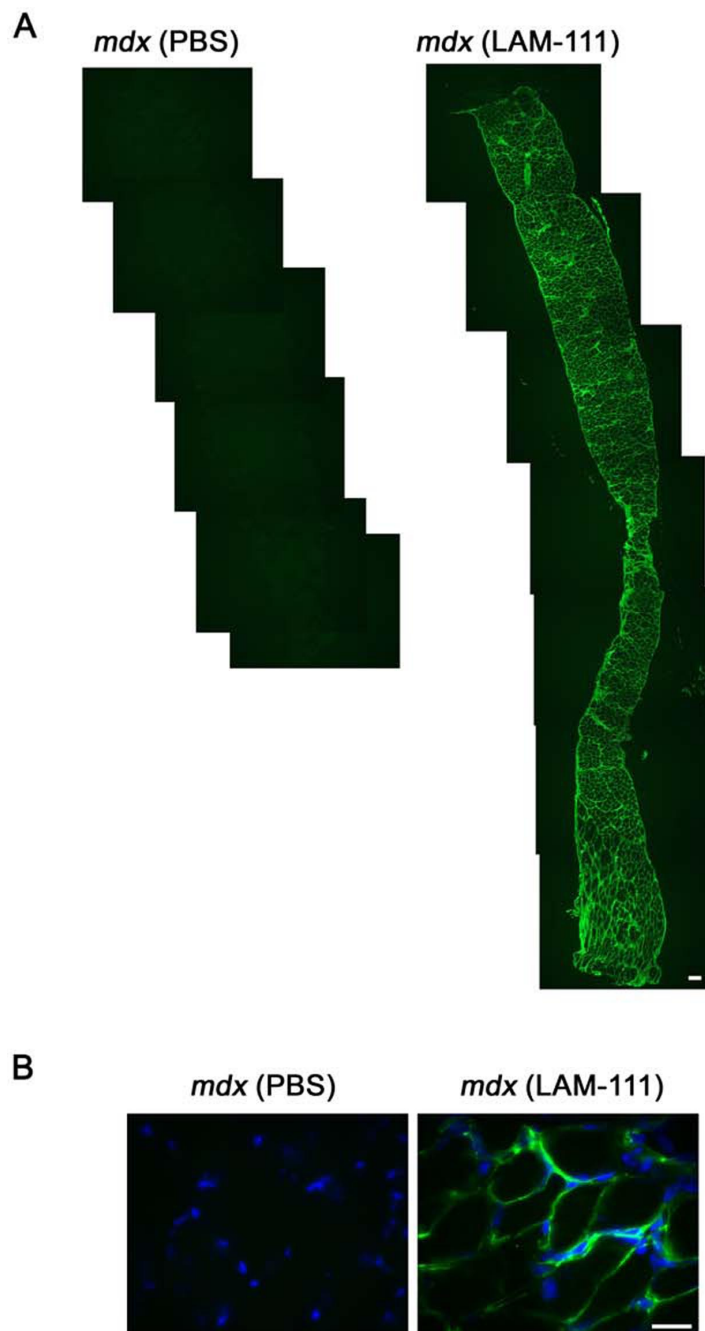

Fig. S1. Laminin-111 protein can be systemically delivered to the diaphragm of *mdx* mice. (A) Immunofluorescence reveals i.p. injected laminin-111 protein is detected throughout the diaphragm of *mdx* mice. (Scale bar: 100 μm .) (B) Alexa488-labeled laminin-111 injected i.p. results in delivery of the labeled exogenous protein to the diaphragm of *mdx* mice. (Scale bar: 20 μm .)
