

Suppl. Table 3 FWHM changes in the expansion of the cell wall autofluorescence in BRI1-GFP expressing hypocotyl and root cells before (0 min) and 30 min after application of 10 nM BL (30 min). The statistical analysis revealed an expansion of the cell wall by $41 \pm 24\%$ ($n = 29$, $p = 0,0145$). The measurements were performed on 29 independent cells derived from 4 independent seedlings.

FWHM [μm]	FWHM [μm]	Expansion [%]
0 min	30 min
