

Suppl. Table 7 FWHM changes in the expansion of the cell wall autofluorescence in wildtype hypocotyl and root cells before (0 min) and 30 min after application of 10 nM BL (30 min.). The statistical analysis revealed a change of the cell wall width by 18 ± 16 % (n = 11, p = 0,2607). The measurements were performed on 11 independent cells derived from 3 independent seedlings.

FWHM [μm]	FWHM [μm]	Expansion [%]
0 min	30 min	
0,73	0,84	15
0,95	1,12	18
1,32	1,96	48
1,33	1,54	16
0,66	0,98	48
0,93	0,95	2
3,10	3,60	16
2,00	2,27	14
2,96	3,33	13
1,49	1,52	2
2,50	2,70	8
mean		18
