^a In order of increasing breast cancer risk observed in previous studies [8,9,16].

^b Adjusted for age, age² and body mass index at mammogram and ethnicity (Caucasian, Japanese, Native Hawaiian).

^c *P_c*: co-dominant *P*-value for the per-allele increase in mammographic density; *P_d*: dominant *P*-value for an increase in mammographic density with any risk allele; *P_r*: recessive *P*-value for an increase in mammographic density with both risk alleles.

CI, confidence interval.
