

Supplemental Figure 1. Identification of genes with significantly different expression in M3 compared to normal myeloid cell fractions. A. Heatmap of microarray data shows genes that are normally expressed only in CD34+ cells, but are aberrantly expressed in M3 cells. B. Heatmap of microarray data shows genes that are normally expressed in promyelocytes, but not expressed in M3 AML cells. C. Heatmap of microarray data shows genes with very high expression levels in M3 cells, but little or no expression in any normal myeloid fraction.

A

B

Supplemental Figure 2. Zn²⁺ treatment induces PML-RARA expression and up-regulation of known downstream targets in PR-9 cells. A. Western blot showing PML-RARA and actin protein levels at 0, 2, 4, 8, 16 and 24 hours post Zn²⁺-induction. NB4 cells, which express PML-RARA, serve as a positive control in lane 1. B. Expression of PML, RARA, PU.1 and CCNA1 in other AML (oAML) subtypes, M3, and PR-9 cells 0-24 hours post Zn²⁺-induction. All are upregulated after PML-RARA induction, as expected. Inset: MTX1, a known Zn-responsive gene, is also upregulated after Zn²⁺ treatment.

Supplemental Table 1. M3-specific dysregulome (510 genes)
