

Legends to supplementary figures

Supplementary figure 1.

Mucosal tolerization and BrdU administration schedule. For induction of mucosal tolerance, E-selectin was instilled intranasally. For labeling of mitotic cells, BrdU was administered intraperitoneally. For cell sorting analysis, animals were euthanized 2, 4, or 7 days after surgery (A). For immunohistochemical and immunoblotting analyses, animals were euthanized 2 or 4 weeks after surgery (B).
