
Supplementary Figure 5. Effect of Paroxetine on the pMV-absorption.
2C T cells pre-treated with titrated concentrations of Paroxetine in the presence (marked with **#**) or absence of anti-LFA-1 mAb were cultured with P1A or QL9 peptide-loaded L^dB7-1ICAM-1 pMVs followed by mAb staining for CD8 and B7-1. Live (PI-negative) cells were gated and used in the plots.
