

Figure S1

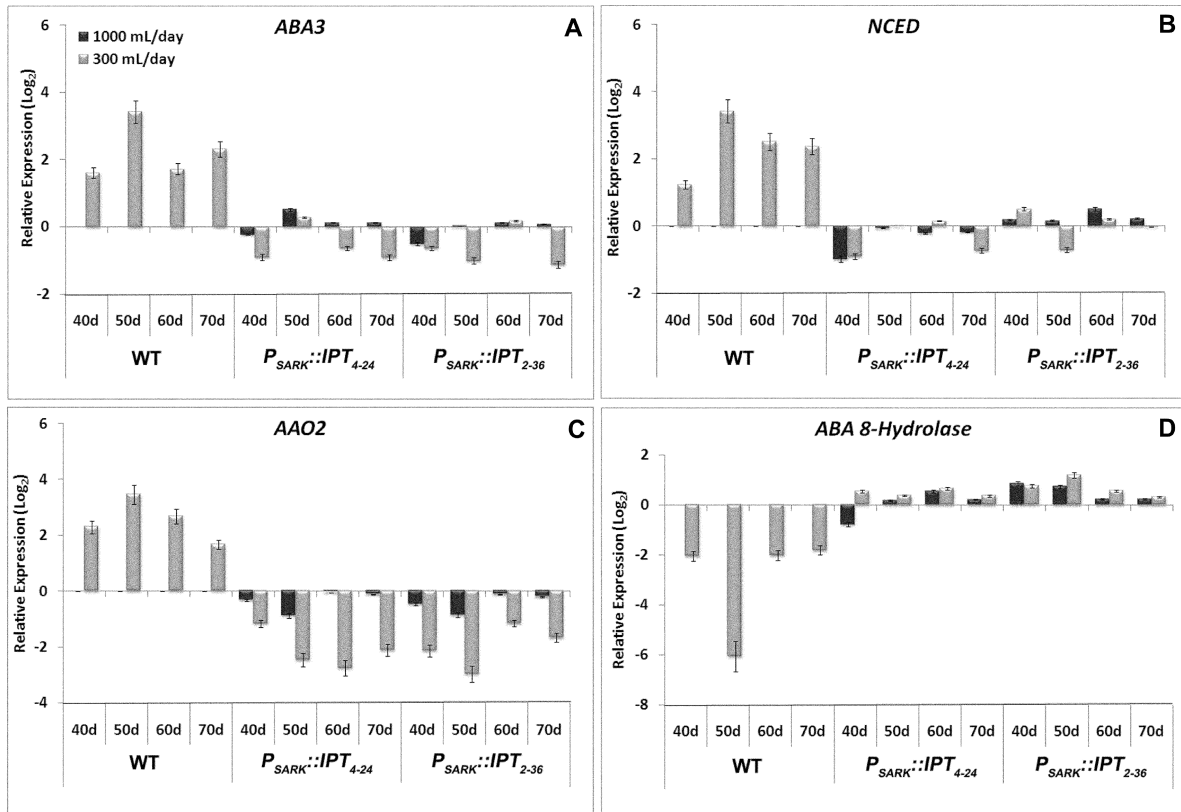

Figure S1. Relative changes in the expression of genes involved in ABA synthesis (*ABA3*, *NCED* and *AAO2*) and degradation (*ABA 8-hydrolase*). Changes were measured in WT and two transgenic lines expressing $P_{SARK}::IPT$ grown during 70 d under optimal (1000 mL d⁻¹) or reduced watering conditions (300 mL d⁻¹). Two internal controls were used to normalize the data (18S and UBQ2). The reference sample used was WT grown under optimal watering conditions. Values are the Mean ± S.E. (n = 6).
