

## Comparirson of GO Enrichment

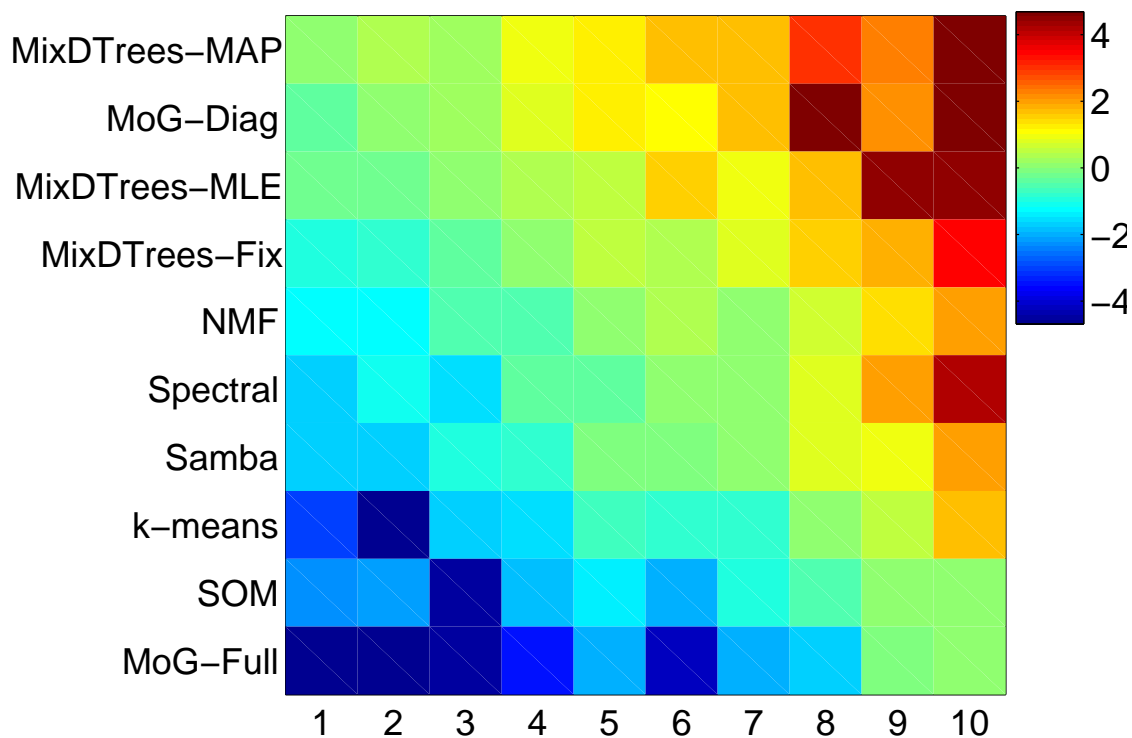

Figure 1: Heat-map plot displaying the comparison of GO enrichment for 10 distinct clustering methods. More precisely, entries in the plot correspond to  $\log(\#\{p\text{-value } m_y < p\text{-value } m_x\} / \#\{p\text{-value } m_y > p\text{-value } m_x\})$ , where red (or blue) values indicate that the method on the  $y$ -axis ( $m_y$ ) had a higher (or lower) count of enriched GO term than the method on the  $x$ -axis ( $m_x$ ); numbers on the  $x$ -axis correspond to the methods in the  $y$ -axis.
