Table S1. miRNAs with parallel AIN-2-association patterns tend to share the same seed sequence. The table lists all the miRNAs that were detected in the AIN-2 IP and also share the same 6nt seed sequence with at least one other miRNA detected in the AIN-2 IP. Cluster indicates the cluster group of the miRNA in Figure 1A, which represents the temporal miRISC-association pattern of the miRNA during development. The residing chromosome number, the genomic start/end position and the coding DNA strand of each miRNA gene are also listed.
