

Supplementary data figure 1: Fig. 5A. Network 2.

The network is a graphical representation of the molecular relationships between genes or gene products (Ingenuity® Systems, www.ingenuity.com). Genes or gene products are represented as nodes, and the biological relationship between two nodes is represented as an edge (line). All edges are supported by at least 1 reference from the literature, from a textbook, or from canonical information stored in the Ingenuity Pathways Knowledge Base. The node color indicates up- (red) or down- (green) regulation. Nodes are displayed using various shapes that represent the functional class of the gene product.
