

Table S1: A summary of the totals, means and relative sensitivity of *An. gambiae s.l.* and *Cx.* species caught by the ITT-B, HLC and SRB

Collection method	Trap nights	<i>An. gambiae s.l.</i>					<i>Cx. species</i>				
		Total catch			Mean catch ^a	Relative sensitivity ^b	Total catch			Mean catch ^a	Relative sensitivity ^b
		Male	Female	Total			Male	Female	Total		
ITT-B	606	33	135	168	0.27	0.35	8634	17689	26315	43.42	0.63
SRB	379	19	27	46	0.12	0.15	1786	3005	4791	12.64	0.18
HLC	195	0	143	143	0.78	1.00 ^c	279	12979	13258	67.99	1.00 ^c

^a=Mean *An. gambiae s.l.* and *Cx. species* caught per night.

^b=Crude estimate relative to HLC, calculated by dividing the mean trap catch by that of the HLC.

^c=Reference trap.
