Amyloid beta A4 protein, Alzheimer disease amyloid protein, ABPP, APP, APP, PreA4, Cerebral vascular amyloid peptide, CVAP, Protease nexin-II, PN-II	Membrane, Single-pass type I membrane protein, Membrane, Clathrin-coated pit, Cell surface protein that rapidly becomes internalized via clathrin coated pits. During maturation, the immature APP (N-glycosylated in the endoplasmic reticulum) moves to the Golgi complex where complete maturation occurs (O-glycosylated and sulfated). After alpha-secretase cleavage, soluble APP is released into the extracellular space and the C-terminal is internalized to endosomes and lysosomes. Some APP accumulates in secretory transport vesicles leaving the late Golgi compartment and returns to the cell surface. Gamma-CTF(59) peptide is located to both the cytoplasm and nuclei of neurons. It can be translocated to the nucleus through association with Fe65. Beta-APP42 associates with FRPL1 at the cell surface and the complex is then rapidly internalized. APP sorts to the basolateral surface in epithelial cells. During neuronal differentiation, the Thr-743 phosphorylated form is located mainly in growth cones, moderately in neurites and sparingly in the cell body. Casein kinase II	*	1
