

A.

B.

	Col-0	<i>omr1-9</i>
MS alone	5.5 ± 0.34	5.33 ± 0.36
1 mM Ile	1.85 ± 0.40	3.82 ± 0.12*

Supplemental Figure S11: Ile tolerance of wild-type Col-0 and *omr1-9*.

Seeds of wild-type Col-0 and *omr1-9* (Thr deaminase knock-down) were surface sterilized and placed on MS agar with or without 1 mM Ile. Root lengths were measured 10-days after germination. (A) representative root growth. (B) Measured root lengths, * = $P < 0.05$, Student's t-test.
