

Centroids of clusters from Supplementary Fig. 15

**Figure S16 | Transcript profiles within each wild-type cluster and cyclin mutant sub-cluster from Supplementary Fig. 15 display high Pearson correlation.** The top panel of each page displays the wild-type log<sub>2</sub>-fold change expression profile for the genes (gray lines) in a single wild-type cluster, overlaid with that cluster's centroid (red line). The bottom panel(s) display the cyclin mutant log<sub>2</sub>-fold change expression profiles (gray lines) and centroids (red line) for all genes in each subcluster associated with the wild-type cluster. Each panel is annotated with the cluster or subcluster name (as labeled in Supplementary Fig. 15), and the average Pearson correlation between all genes displayed. A list of genes in each cluster/subcluster can be found in Supplementary Table 2.
