Suppl. Figure 5. *MAR1* **expression pattern. (A and B)** *MAR1* is strongly expressed in all tissues of young seedlings. The *GUS* gene was expressed under control of the *MAR1* promoter (888 bp upstream of the *MAR1* start codon). Histochemical X-GLUC staining was performed on several independent lines. **(A)** Representative 7-day-old seedling. **(B)** Representative 14 day-old seedling. **(C)** Developmental expression of *MAR1*. mRNA levels for *MAR1* (At5g26820) were obtained from AtGenExpress (Schmid et al., 2005).
