Supplementary Figure 1. eFACS of two-to-four-cell stage embryos. (**a**) A mixed population of embryos from the OMA-1::GFP strain is passed through a Fluorescent Activated Cell Sorter (FACS). Scatter plot depicts GFP fluorescent signal versus a second fluorescence channel used for autofluorescence detection. We attempted to sort two-cell stage embryos by selecting a less GFP fluorescent population of embryos (single asterisk (*), ~5-10% of the initial population). (**b**) This population can also be highly enriched by resorting (double asterisk (**)) but represents a mixture of two-four-cell stage embryos as observed by microscopic examination (panel c). (**c**), Characterization of the resorted embryos by fluorescence microscopy of a representative FACS run. DAPI stained pronuclei appear black. Scale bar, 25μm. (**d**), RT-PCR analysis of a mixed non-sorted embryo population (lanes 1-5) compared to the resorted two-four-cell stage embryos sample (**) (lanes 6-10). In resorted embryos (**) the early zygotic (four-to-eight-cell stage) transcribed genes *med-1* and *end-1* (lanes 8-9) and one-cell stage specific marker genes *oma-1* and *oma-2* (lanes 6-7) are amplified. Compared to mixed embryos *med-1* is less abundant in the resorted two-to-four-cell stage embryo sample (*act-1*, RT-PCR control). (**e**), microscopic validation of the resorted embryos. The resorted population yields a sample with around 70% two-to-four-cell stage embryos (lanes 2-4) contaminated with around 15% of one-cell stage embryos (lane 1) and lesser amounts of eight-cell stage or older embryos (lanes 5-6). (Error bars, s.d., n=4; 100 embryos counted per replicate)

Supplementary Figure 2
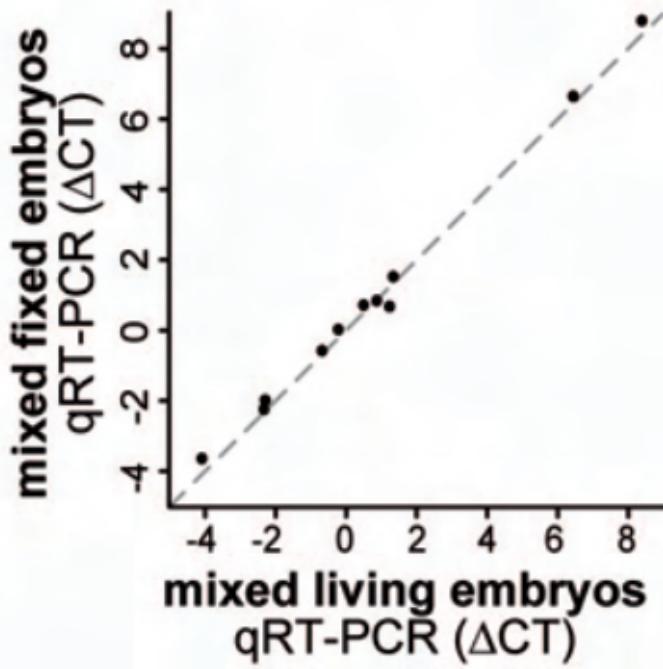

Supplementary Figure 2. Comparison of miRNA expression in fixed and living mixed embryos.

Quantitative RT-PCR analysis of 10 miRNAs and one snRNA in fixed and non-fixed embryos shows that fixation does not alter miRNA expression. The plot depicts delta CT values for 11 miRNAs relative to snoRNA U18.

Transition from 1-cell stage to post-gastrulation

Sequencing Fold Changes

qRT-PCRs
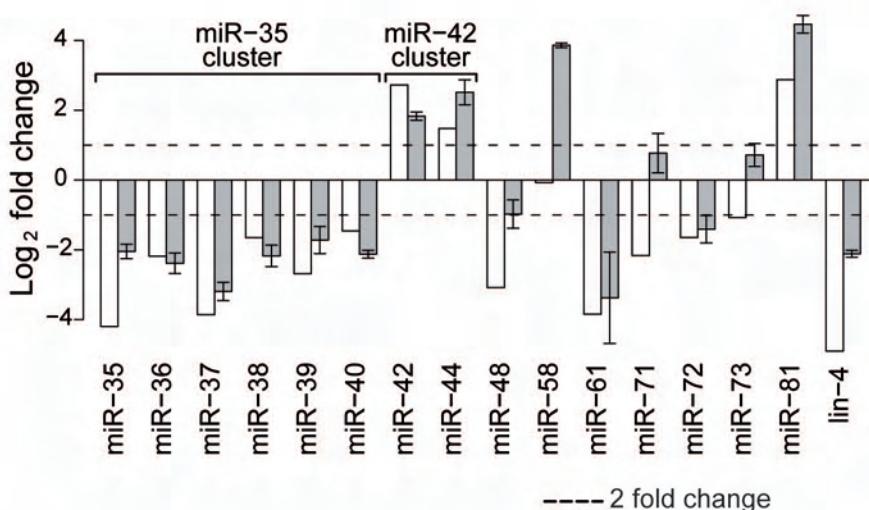

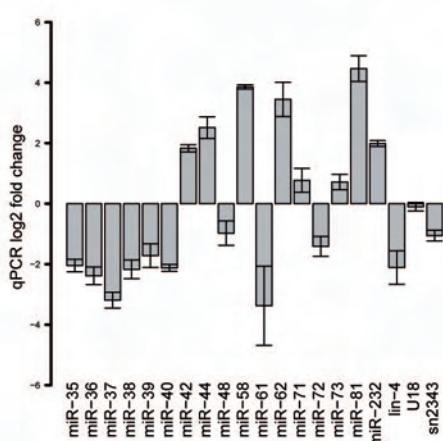

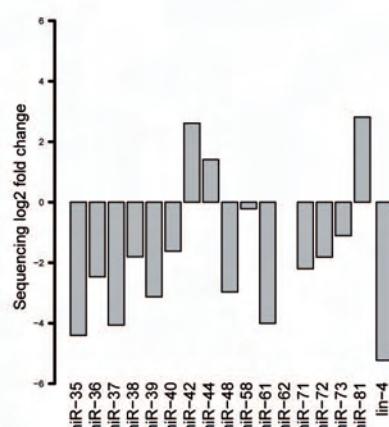

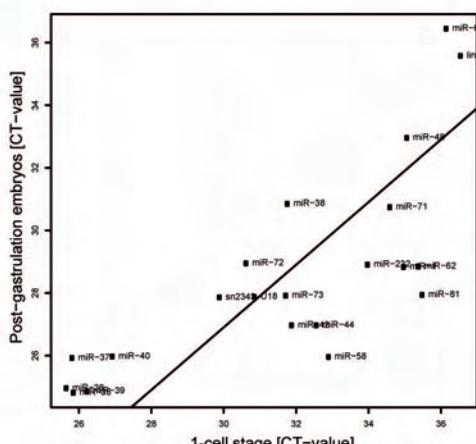

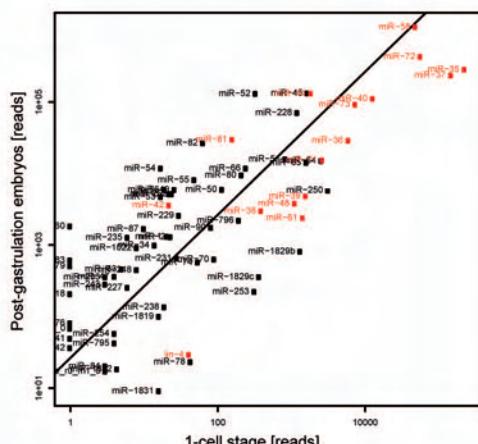

----2 fold change

☐ Sequencing fold changes

▨ qPCR fold changes
(hand-picked embryos)

Supplementary Figure 3. Validation of 16 miRNA fold changes computed from the deep sequencing data by qRT-PCRs on hand-picked living embryos.

The figure depicts fold changes in qRT-PCRs (relative to U18) and deep sequencing (logistic model, see Methods and Fig. 4).

Supplementary Figure 4

a

Transition from 1-cell to 2-4-cell
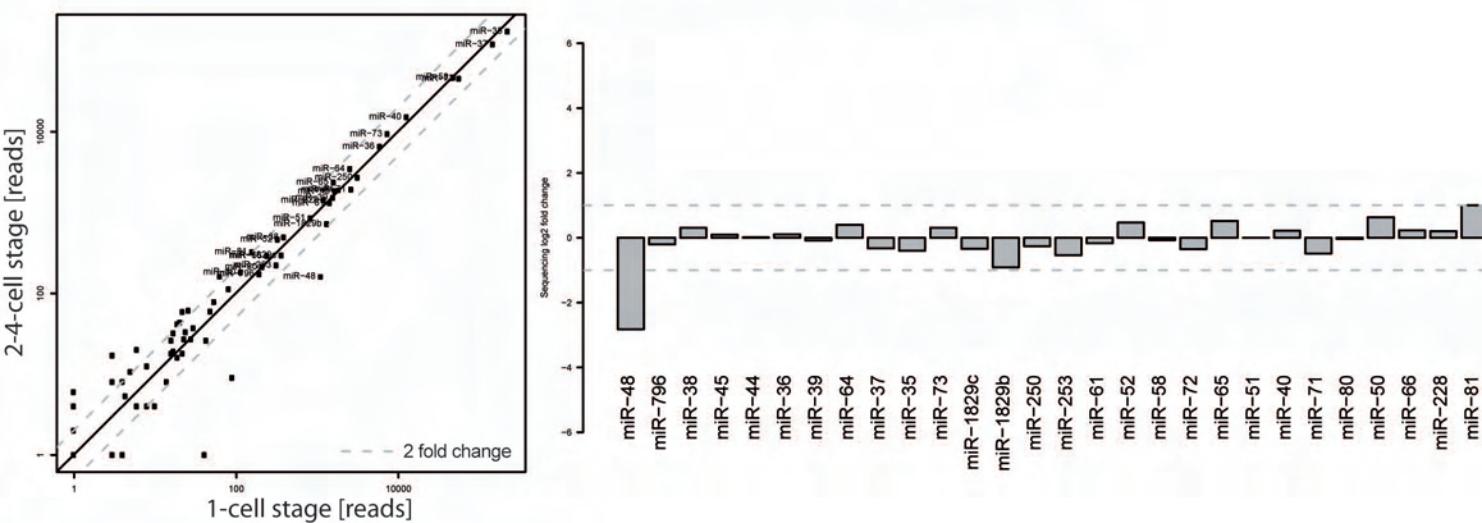

b

Transition from 2-4-cell to post-gastrulation embryos
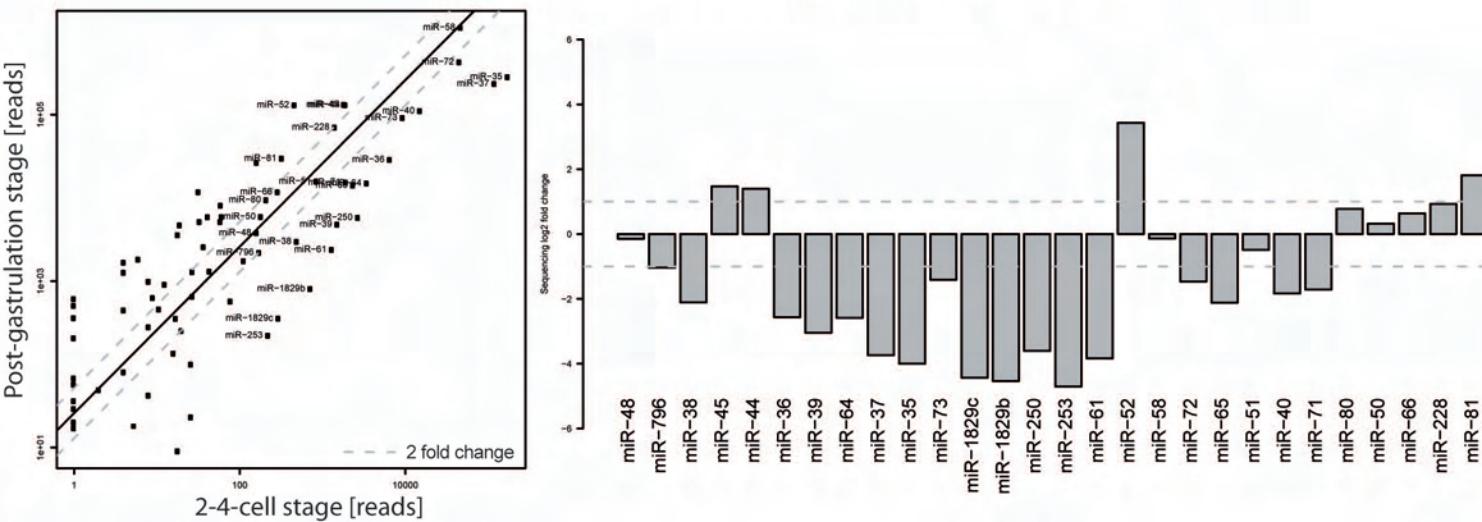

Supplementary Figure 4. miRNA expression fold changes between the different samples.

We computed miRNA expression fold changes from the deep sequencing data between our one-cell, two-to-four-cell, and post-gastrulation samples. The doubly logarithmic scatter plots display the number of normalized sequencing reads in the different samples. The grey line represents two fold-changes. The bar plots depict the fold changes for a set of 28 miRNAs that have a high net fold-change between all assayed samples. **(a)** Transition from one-cell to two-to-four-cell stage. Overall, the least amount of change is visible across the first cell divisions. However, miR-48 seems to decrease more than 5-fold from the one-cell to the two-to-four cell embryo. **(b)** Transition from two-to-four-cell to post-gastrulation stage embryos. More widespread and largest changes in miRNA expression are observed at this transition. Also a number of miRNAs are for the first time found to be highly expressed.

Supplementary Table 1. Sequencing and mapping results in the samples.
Base called reads gives the number of reads produced by the base calling software, including low-quality reads with multiple unidentified nucleotides. Total mapped reads refers to reads with a locus in the genome within edit distance 2 of the sequenced transcript. We found the post-gastrulation sample to be contaminated with presumptively human material. Thus we mapped all samples both against the worm and the human genome using the pipeline described in the Methods section, and retained only reads mapping superiorly to the worm genome. Reads after contamination filtering are those that map to the worm genome with a lower edit distance. Removal of the human contamination did not change any of the conclusions.

	1-cell stage (fixed resorted)	1-cell stage (living sorted)	2-4-cell stage (fixed resorted)	Older embryo (sorted)	Post-gastrulation	Mixed embryos
Base called reads	3742851	3101329	1918882	6080679	12330674	2312231
Total mapped reads	1547554	1416448	974654	4529684	5040373	1707757
Reads after contamination filtering	1509590	1067503	964873	4013182	3213177	1500137

	1-cell stage (fixed resorted)	1-cell stage (living sorted)	2-4-cell stage (fixed resorted)	Older embryo (sorted)	Post-gastrulation	Mixed embryos

Supplementary Table 2. miRNA predictions using miRDeep.
The table depicts 19 predicted miRNAs from our datasets including star and precursor sequences.

Supplementary Table 5. Sequencing miRNA expression.
Deep sequencing reads ("Illumina") were mapped to the genome as described in the methods. The counts in this table give the number of weighted mappings of reads overlapping with mature miRNAs.

	1-cell embryo	Living 1-cell embryo	2-4-cell embryo	Older embryos (sorted)	Post-gastrulation embryo	Mixed embryo

Supplementary Table 6. 21U-RNAs are highly expressed in 1-cell embryos. The table represents unnormalized read counts for 21U-RNAs in the different samples that have been analyzed.

	1-cell stage (fixed resorted)	1-cell stage (living-sorted)	2-4-cell stage (fixed sorted)	Post-gastrulation embryos	Older sorted embryos	Mixed embryos
21U-RNA unnormalized reads (total)	6048	5484	6133	5837	4038	2700

Supplementary Table 7. Expression of 21U-RNAs.
15703 21U-RNA sequences were retrieved from the supplementary material of Batista *et al,* 2009, and mapped to the genome. The subset mapping to unique positions in the genome was quantified by reporting weighted mappings of reads that overlap with each 21U-RNA.

21U-RNA	1-cell	Living 1-cell	2-4-cell	Older embryos (sorted)	Post-gastru. embryos	Mixed

Supplementary Table 8. qRT-PCR results 16 miRNAs on hand-picked one-cell stage embryos.

We used TaqMan miRNA assays to independently validate the miRNA expression of 16 miRNAs observed in the deep sequencing on hand-picked living one-cell stage embryos.

miRNA qRT-PCR (TaqMan) Results (CT)

		rep1	rep2	rep3
