5 7 genes induced in the lung by both HDM and RWP as determined via Venn Analysis (Fig1B).

6 Values represent mean fold-change differences from corresponding controls N= two independent

7 samples per treatment group). Gene expression differences between treatments and

8 corresponding control groups for each of the 3 treatments (HDM, RWP, and IL-4/IL-13) were

9 determined via Student's *t*- test with p \geq 0.05. The overlapping gene lists were further filtered by10 fold induction of \geq 2. HDM-house dust mite, RWP-ragweed pollen protein.
