

Supplemental figure 3. *S27D* does not affect the phosphorylation levels of VE-cadherin. HUVECs were incubated with *S27D* for 30 minutes (**A**) or for 4.5h and 4.5h followed by wash out (**B**). VE-cadherin was immunoprecipitated (I.P.) and samples were analyzed by Western blotting with a phosphotyrosine-specific Ab (PY20) (I.B.). Results showed that *S27D* did not affect tyrosine phosphorylation levels of VE-cadherin. Actin was included as a loading control.
