

SUPPLEMENTAL DATA

SUPPLEMENTAL FIGURE LEGENDS

Fig. S1. **MS/MS spectrum of a phosphopeptide pTPSISPVR.** δ -Catenin was enriched by immunoprecipitation with lysates from δ -catenin overexpressing GSK-3 β $+/+$ fibroblast. The gel fraction corresponding to δ -catenin separated on SDS-PAGE was digested by trypsin. Phosphopeptides from tryptic peptides are enriched by TiO₂ method and analyzed by LC-MS/MS. The series of y ions corresponding to a pTPSISPVR peptide are shown.

SUPPLEMENTAL FIGURE S1.
