

SUPPLEMENTAL DATA

SUPPLEMENTAL TABLE 1

Summary of the effects of Rubisco small-subunit substitutions and the relationships of the substituted residues to the large subunit

The mutant substitutions are grouped according to their locations near the carboxyl-terminal bottom, middle, or amino-terminal top of large-subunit α -helix 8.

Substitution	Growth at 35 °C ^a	Effect on catalysis ^b	α C - C2-CABP	Large-subunit interactions ^c distance (Å)
Bottom region of large-subunit α -helix 8				
Y32A	inhibited	$\downarrow\Omega$, $\downarrow V_c$, $\downarrow K_o$	34.2	R431, N432
Middle region of large-subunit α -helix 8				
S16A	normal	minor	27.1	E234, R421, E425
L18A	inhibited	not determined	27.6	E425, A426, Q429, W451
P19A	normal	minor	31.2	W451
Top region of large-subunit α -helix 8				
E43A	inhibited	$\downarrow\Omega$, $\downarrow V_c$, $\uparrow K_c$, $\uparrow K_o$	28.5	R187
W73A	inhibited	$\downarrow V_c$, $\uparrow K_c$, $\uparrow K_o$	27.1	Y190
L78A	inhibited	$\downarrow V_c$, $\uparrow K_c$, $\uparrow K_o$	22.7	F13, W70, P410, G412
P79A	normal	$\downarrow V_c$	23.9	W70
F81A	inhibited	$\downarrow V_c$, $\uparrow K_c$, $\uparrow K_o$	24.6	A11, G12, W70, G73, L74
E92A	normal	minor	33.3	none

^a Summary of results from Fig. 2.

^b Summary of results from Tables 1 and 2.

^c Except for a Glu-43 to Arg-187 salt bridge, all interactions are by van der Waals contact.

SUPPLEMENTAL TABLE 2

Identities of large-subunit residues from representative species that are in contact with conserved small-subunit residues

The corresponding residues in the L2 Rubisco of *Rhodospirillum rubrum* (RR), which lacks small subunits, is included for comparison.

Species ^a	Large-subunit residues																		
	11	12	13	70	73	74	187	190	234	410	412	421	425	426	429	431	432	451
