

### Supplemental Figure 3

#### **Supplemental Figure 3. Expression levels of $\alpha$ 1G mRNA by stimulating FCS**

Relative abundance of  $\alpha$ 1G mRNA measured by quantitative RT-PCR. The expression of  $\alpha$ 1G mRNA did not change between the no FCS and 10% FCS at the condition of the culture medium. The values are expressed as means $\pm$ SEM. n=3. n.s.: not significant.
