

SUPPLEMENTAL FIGURE LEGENDS

Figure S1. Time course for PUMA and NOXA protein levels during treatment with palmitate or oleate. A and B, Whole cell lysates were prepared from Huh-7 cells treated with palmitic acid (PA) or oleic acid (OA) at 800 μ M at the indicated time intervals. Immunoblot analysis was performed for PUMA and NOXA protein expression. β -actin was used as control for protein loading. PUMA/ β -actin and NOXA/ β -actin ratios were calculated by densitometry and normalized to time 0.

Figure S1
