Figure S6. The sensing results for the control samples of ochratoxin.

1 **The detailed process of the ELISA is as follows:**

- 2 1. Coat each well in a 96-well plate (Costar #9018) with 100 μ L of a coating antigen
3 solution.
4 2. Cover and rock overnight in an incubator at 4°C.
5 3. Wash 3 times with PBS-Tween 20 in vacuum-apparatus and pat dry.
6 4. The plate was blocked with 100 μ L (0.5%, w/v) OVA solution in PBS solution for
7 2 h at 37 °C.
8 5. Wash 3times with PBS-Tween 20.
9 6. Add 100 μ L/well MC-LR at different dilutions or samples with 100 μ L/well pAb
10 then incubate for 0.5 hour at 37 °C.
11 7. Wash 3times with PBS-Tween 20 and pat dry.
12 8. Dilute horseradish peroxidase-conjugated goat anti-rabbit IgG 1 : 3000 in
13 PBS-Tween 20 for 0.5 hour and incubate as before.
14 9. Wash 6times as before and pat dry.
15 10. Prepare color substrate (TMB) and add 100 μ L/well for 15 min in dark at room
16 temperature.
17 11. H₂SO₄ (2 mol/L) was added to stop the reaction and record the absorption in a
18 micro plate reader at 450nm.
