

Supp. Fig. 6. Rescue of multiple mutant p53 by ethanol or bortezomib treatment. Stationary phase culture of yeast yIG397 expressing the indicated human p53 allele was diluted 1:1000 in SC-ade -ura media supplemented with either 4% ethanol or 50 μ M bortezomib and grown at 30°C for 24 h. Growth was then determined by measuring OD at 600 nm.
