Table 1a. Spearman Correlations of Early Risk Factors with School-Age Inhibition Scores at Each Assessment

School-Age Inhibition Scores <sup>a</sup>					
	Grade 1	Grade 3	Grade 5	Grade 7	Grade 9
Child gender (0 = boys; 1 = girls)	.222 **	.278 **	.212 **	.256 **	.134 *
Exposure to maternal stress, birth to age 4.5 years	.121 +	.177 **	.120 +	.175 **	.219 **
Observed behavioral inhibition, age 4.5 years	.317 **	.300 **	.153 *	.157 *	.161 *
Afternoon basal cortisol levels, age 4.5 years	.214 **	.253 **	.213 **	.114 +	.069

N = 238

<sup>a</sup> First PCA component scores as described in Measures section.

+  $p < .10$ ; \*  $p < .05$ ; \*\*  $p < .01$
