

## SUPPLEMENTARY FIGURES

**Fig.1. Schematic depiction illustrating the various mutants used to probe the specificity of Plks mediated phosphorylation of synucleins.** Table summarising the *in vitro* phosphorylation of human a-, b- and g-syn, a-syn variants, as well as mouse WT a-syn after 24 hours of phosphorylation. Key: +, > 10% phosphorylation, ++, > 20% phosphorylation, +++, > 50% phosphorylation, +++++, > 75% phosphorylation, +++++, 100% phosphorylation.

**Fig. 2. *In vitro* phosphorylation of a-syn harbouring mutations in the NAC region by PLK1-4.** MALDI-TOF analysis of the phosphorylated human E83A, S87A and S87E a-syn by PLK1-4.

**Fig. 3. *In vitro* phosphorylation of  $\alpha$ -syn harbouring mutations in the C-terminus by PLK1-4.** (A) MALDI-TOF analysis of the phosphorylated S129A  $\alpha$ -syn by PLK2. (B) MALDI-TOF analysis of the phosphorylated mouse WT and human E126A  $\alpha$ -syn by PLK1-4.
