

(B)

Supplemental Data 4. Characterization of tyrosine phosphatase (wzb^-) and kinase (wzc^-) knockout strains.

(A) These strains tested were cultured overnight in LB broth at 37° C and subjected to centrifugation at 10,000 kg for 5 min. In contrast to highly encapsulated strains, K2044, wzb^{-} and wzc^{-} mutants showed compact pellet after centrifugation. (B) These strains were cultured overnight on LB agar plates at 37° C. The diameters of wzb^{-} and wzc^{-} were less than 1.5 mm like $magA^{-}$ strain.
