*VP1, virus protein 1; SAFV, Saffold cardiovirus; HTCV, human Theiler's murine encephalomyelitis virus-like cardiovirus.

†All results are based on the pairwise analysis of 25 currently available sequences of SAFV VP1 genes by using MEGA version 4.0 (14). Identification of these SAFV strains is shown in the legend of the Figure. The final dataset contained a total of 273 positions. The results showed the similarity in amino acids and nucleotide sequences between these positive samples and the VP1 of other SAFVs. Because the sequences of SAFV-4 to SAFV-8 are not available, they are not included in amino acid and nucleotide acid sequence identity analysis. Values are expressed as identity of amino acid sequences/identity of nucleotide sequences.
