ARRAY INFORMATION:

Array Used:	Affymetrix Mouse Genome 430A 2.0 Array
Platform:	GPL8321

PROTOCOLS USED:

Isolation Protocol:	Minced mammary glands/mammary tumors were digested with 20mg Collagenase Type 2 (Worthington), 480 Units DNaseI (Boehringer) and 1mM MgCl ₂ at 37°C and then stroma was enriched by gravity separation. The YFP-positive cell population was sorted using Fluorescent Activated Cell Sorting with the BD FACSAria™.
Extraction Protocol:	RNA was extracted with the RNeasy Stratagene micro-prep column (Stratagene) as per the manufacturer's instructions.
Label Protocol:	Biotinylated cRNA was prepared according to the standard Affymetrix protocol from 2 ug total RNA (Expression Analysis Technical Manual, 2007, Affymetrix).
Hybridization Protocol:	Following fragmentation, 15 ug of cRNA was hybridized for 16 hours at 44°C on Mouse Exon 1.0 ST GeneChips. GeneChips were washed and stained in the Affymetrix Fluidics Station 400.
Scan protocol:	GeneChips were scanned using the Affymetrix GeneChip Scanner 3000 7G
Data Processing:	RMA method was applied to the primary data to correct the technical bias and summarize gene expression values over probe sets

Value Definition:	Log2 expression values
Data Analysis:	<p>All values are represented as Log2. The primary data was analyzed by modified RMA method to yield average gene expression values (1, 2).</p> <p>For the subsequent analysis, gene expression differences between normal macrophages with or without Ets2 were compared to the differences between tumor macrophages with and without Ets2, and a value termed the Interaction (INT) value was derived. The formula used for determining INT was: $\text{INT} = [(D.WT - D.E2) - (T.WT - T.E2)]$</p> <p>T.E2 and D.E2 are the average values for expression of a given gene in tumor macrophages and normal developmental macrophages that lack Ets2, respectively, and T.WT and D.WT are the corresponding values for the same gene in tumor and developmental macrophages containing Ets2. This equation captures differences in gene expression in tumor macrophages compared to normal developmental macrophages with Ets2, that is, tumor-specific effects.</p> <p>Gene ontology analysis was performed using DAVID Bioinformatics 2008 Tool (bioinformatics source of National Institute of Allergy and Infectious Diseases, NIH). The biological processes regulated were confirmed by manual curation (available upon request).</p>
