

Supplemental Figure 2

Supplemental Figure 2: *Lat2*^{-/-} M Φ display a skewed LPS-induced cytokine profile

BMM Φ from WT and *Lat2*^{-/-} mice were stimulated for 24hrs with 100ng/ml LPS. Supernatants were quantified for IL-1 β , IL-10 and TNF α using the LINCoplex cytokine assay. Solid bars represent WT, hatched bars represent *Lat2*^{-/-}. Results are representative of at least 2 independent experiments with a pool of 3 mice in each.
