

Supplementary information

Movie S1: Structure of the Sgf11:Sus1 complex. Sgf11 residues 8-31 are shown in yellow and Sus1 in blue.

Movie S2: Overlay of the structure of the Sgf11:Sus1 (yellow, cyan) and Sac3:Sus1 (red, blue) structures. Overall, the fold of Sus1 is conserved albeit helix $\alpha 1$ varied considerably in position (see also movie S3)

Movie S3: Structural plasticity of Sus1 when complexed with Sgf11. In contrast to the Sac3:Sus1 complex, the position of helix $\alpha 1$ varied considerably between and within crystals.
