

Supplemental data

Supplemental Figure. *Increases in the level of TGFβ1 mRNA expression in the urinary bladder following CYP-induced cystitis.* After CYP treatment for 8 hr, the urinary bladder was homogenized for RNA extraction. Real-time PCR results showed that the TGFβ1 mRNA level was increased in the inflamed urinary bladder when compared to control. Results were presented as mean ± SE from 4 animals at each time point. *, $p < 0.01$.
